

ADDENDUM

Orion HDX-110 EQ-G Equatorial GoTo Telescope Mount

Addendum to Instruction Manual IN 502

The Orion HDX-110 EQ-G Equatorial GoTo Mount has been upgraded with a built-in USB port. This addition was made after the instruction manual for this mount was produced, so it is not pictured or described in the manual. This Addendum is included to make you aware of this new feature.

The USB port – a USB Type B port – is installed on the mount's electronics panel (**Figure 1**) just above the "Hand Control" port. Note also that the relative positions of some other ports on this and the adjacent panel have changed. For instance, the Hand Control port is now located above the Auto Guide port. And the power cable jack is located on this same (side) panel now, not the front panel as before.

The USB port enables control of the mount with select 3rd party software applications running on a computer, and allows updating of the mount's motor controller firmware via USB connection to a computer. Most computers are equipped with one or more USB Type A ports. So the cable you would need to purchase to make the connection between your computer and the HDX mount is a USB-A to USB-B cable.

Figure 1. A USB Type B port has been added directly above the Hand Control port on the electronics panel.
